

Agent Enforcer

Founding Partner Proposal

CONFIDENTIAL

FOUNDING PARTNER PROPOSAL

Executive Summary

Alchemist is pleased to present this Founding Partner Proposal for the deployment of **Agent Enforcer** - an enterprise AI policy enforcement platform purpose-built for government environments.

YEAR 1 INVESTMENT \$2,500,000	YEAR 2+ ANNUAL \$3,250,000
--	---

This proposal covers a full Agency-tier deployment of Agent Enforcer for up to 1,000 registered enforcement agents, dedicated Managed Enforcement Specialists embedded with your organization, and a Founding Partner rate reflecting our **Founding Partner's** position as an early adopter and strategic reference account.

Based on conservative assumptions about your AI token spend, we project Agent Enforcer will **return its cost in token savings alone within 12–18 months** - with security enforcement, compliance assurance, and standardized coding output delivered as immediate, compounding value from Day 1.

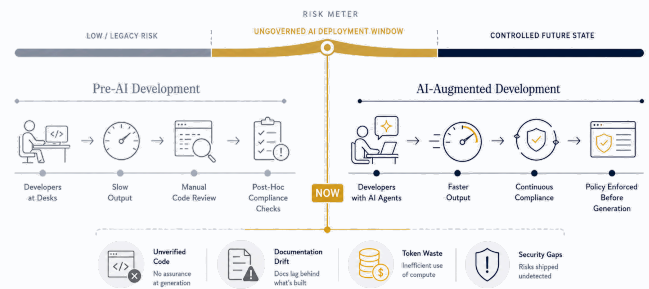

Understanding Your Environment

We recognize that government AI deployments are not uniform. Our **Founding Partner's** requirements likely span multiple dimensions that commercial tools do not address.

DIMENSION	WHAT WE ADDRESS
Security Controls	NIST 800-53, CMMC, FedRAMP, and program-specific requirements embedded into every AI session.
Accreditation	ATO-supportable audit trail of enforcement policy version history.
Network Architecture	Cloud-native; supports air-gapped cloud environments with endpoints configurable for isolated network boundaries.
Internal Policy	Custom enforcement documents authored to your specific security and coding standards.
Workforce Scale	Enforcement propagates to all registered endpoints within 15 minutes - no per-user configuration.
Existing Tooling	Installs alongside Claude Code, Kiro, Cursor, and GitHub Copilot; no existing workflow disruption.

Our Managed Enforcement Specialists will invest time upfront learning your environment before a single enforcement document is written.

The Opportunity

Federal agencies are in a brief but consequential window. AI coding assistants are being deployed at scale - and the governance frameworks to control them are still catching up.

Every day an AI agent runs without enforcement is a day that code is generated without verification, compliance documentation reflects intent rather than output, token spend accrues without efficiency gains, and the organization's AI posture remains undocumented to auditors.

Agent Enforcer closes this window.

ECONOMIC CASE

Return on Investment

Token Savings

Based on publicly available benchmarks and Alchemist's own controlled testing, we use the following conservative model:

Monthly token spend	\$1,000,000
Annual token spend	\$12,000,000
Conservative efficiency gain	28%
Annual token savings	\$3,360,000

At 30% efficiency, annual savings reach **~\$3.6M**. At 35%, **~\$4.2M**.

Token savings alone exceed the Year 1 investment — Agent Enforcer pays for itself on efficiency alone.

Security Risk Reduction

In Alchemist's controlled testing, unenforced AI coding sessions produced an average of **one critical security vulnerability per task** that would require human remediation before deployment. Enforced sessions produced zero.

Agent Enforcer does not replace your security team. It makes your security team's requirements impossible for AI agents to ignore.

Productivity & Standards Value

Standardized AI output means less code review friction, fewer rework cycles, junior developers operating with institutional standards from Day 1, and consistent, auditable AI-assisted development practices.

A 5% productivity improvement across 1,000 developers at a fully loaded cost of \$200k/developer/year equals **\$10M in recovered developer capacity annually**.

Proposed Solution

WORKS WITH: Claude Code Kiro Cursor GitHub Copilot

Component 1 - Agency Platform License: Agent Enforcer Agency Tier for up to 1,000 registered enforcement agents, with RPM deployment, central policy distribution, 15-minute propagation, system-level enforcement, version history, and AWS-native management.

Component 2 - Managed Enforcement Specialists: A dedicated Alchemist specialist for environment learning, policy authoring, ongoing updates, monthly reporting, compliance documentation, and technical review sessions.

COMMERCIAL TERMS

Proposed Investment

FOUNDING PARTNER RATE - 23% BELOW STANDARD

Year 1 - Founding Partner Investment

Agency Platform License	\$1,500,000
Managed Enforcement Specialists	\$1,000,000
Onboarding & Implementation	Included
Total Year 1	\$2,500,000

Year 2+ Standard Rate

Agency Platform License	\$2,000,000
Managed Enforcement Specialists	\$1,250,000
Total Annual	\$3,250,000/year

Founding Partner Benefits

- **Roadmap influence** - direct input into federal-specific product priorities.
- **Reference account exclusivity** - Alchemist will not list your agency publicly without written approval.
- **Expansion pricing lock** - Expansion seats priced at \$1,500/seat during the contract period.

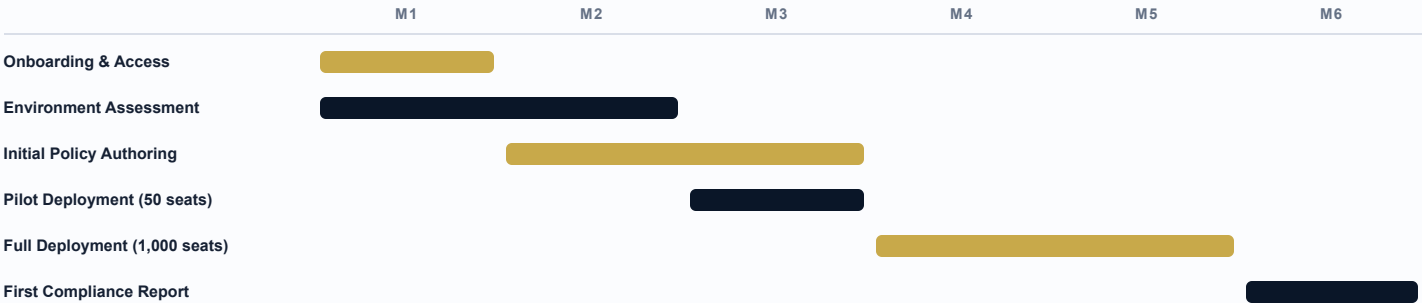

Payment & Contract Structure

Contract type	Firm Fixed Price (FFP)
Payment schedule	50% upon award; 50% at 6-month milestone
Contract vehicle	IC Marketplace (ICMP); GSA Schedule, agency vehicle, and sole source justification available
Period of performance	12 months from contract award
Renewal	Annual, at standard rates

Alchemist is prepared to support sole source justification under FAR 6.302-1 given Agent Enforcer's unique technical approach to AI enforcement. Sole source documentation available upon request.

DEPLOYMENT PATH

Implementation Timeline

MONTH	MILESTONE
1	Contract award, onboarding, access provisioned, kickoff with Managed Enforcement Specialists.
1–2	Environment assessment: security architecture, compliance frameworks, and policy requirements gathered.
2–3	Initial enforcement documentation authored and reviewed with your team.
3	Pilot deployment: 50 developer seats, policy validation, and feedback cycle.
4–5	Full deployment to all 1,000 seats; enforcement active across organization.
6	First compliance and efficiency report delivered; policy refinement cycle begins.

Next Steps

To move this proposal forward, Alchemist requests a 60-minute technical and business discussion with your team covering seat count, compliance frameworks, preferred contract vehicle, and any air-gap or private cloud requirements.

About Alchemist

Advanced software products for mission-critical environments.

Alchemist builds advanced software products at the intersection of artificial intelligence, big data analytics, and cloud efficiency. Our team brings deep expertise deploying AI systems at enterprise scale, engineering high-throughput data pipelines for mission-critical workloads, and optimizing cloud architectures for performance and cost.

Agent Enforcer is production-tested infrastructure. Cloud-native and deployable into air-gapped cloud environments, it delivers measurable AI governance, data-level audit trails, and compounding efficiency gains from Day 1.

This proposal is valid for 60 days from the date of delivery. Pricing is subject to final scope confirmation. This document is Alchemist Proprietary and Confidential - not for distribution outside of the Founding Partner organization.
